

# O21-Front manual pressure regulator

Front panel precision mechanical regulator

## Description

The optional includes the installation of a mechanical pressure regulator located on the front panel of the instrument and can be applied to ForTest's M-Series and T-Series test units.

The optional is not available only for M-Series M4000 and M2000 instruments.

Mechanical pressure regulator

In case the optional "O32 Electronic regulator" is inserted The optional "Manual front pressure regulator" is not mounted and removed from the front panel of the control unit.

Electronic pressure built-in regulator

In the "leak test" instruments, the pressure is adjusted during the "filling" phase by turning the regulator clockwise to increase the pressure and anticlockwise to decrease it.

Direct pressure shown on display

Same thing happens for "flow test" instruments with the only difference that the pressure adjustment takes place at any test stage.

## Technical code

Within the technical code the field defining the optional "Mechanical pressure regulator" is in position 21.
